

Smart home, intelligent living, endless possibilities.

Welcome to the new era of smart home living. We present our cutting-edge technology, carefully tailored to enhance your comfort and convenience. Connect with the future as we explore endless possibilities that will transform your home experience. Step into a world where luxury and practicality merge, where the latest technological innovations come together to create a truly modern sanctuary.

BeeHiveSG

Gateway that manages and communicates with all smart devices in the home.

The brain of SmartHome, managing the entire home automation system in the background, allowing devices in your home to work together - from lighting to heating control. In addition to electrical power, it is important to ensure a wireless internet connection, which is necessary for remote communication with devices. Our smart system operates within the home, so even in the event of an internet connection outage, you don't have to worry about losing complete control over your home.

- The BeeHive App enables control of the smart home using Android and iOS mobile devices, as well as computers.
- It allows remote access and control from virtually anywhere.

Our Smart Home system not only makes your home intelligent but also responsible. By integrating all technological components, we create a seamless experience that enhances your everyday life. Our smart home system operates in a simple manner, connecting various devices and systems in your home. This allows for intuitive control through a single smart interface, whether you're at home or in a remote location.

Exceptional Convenience:

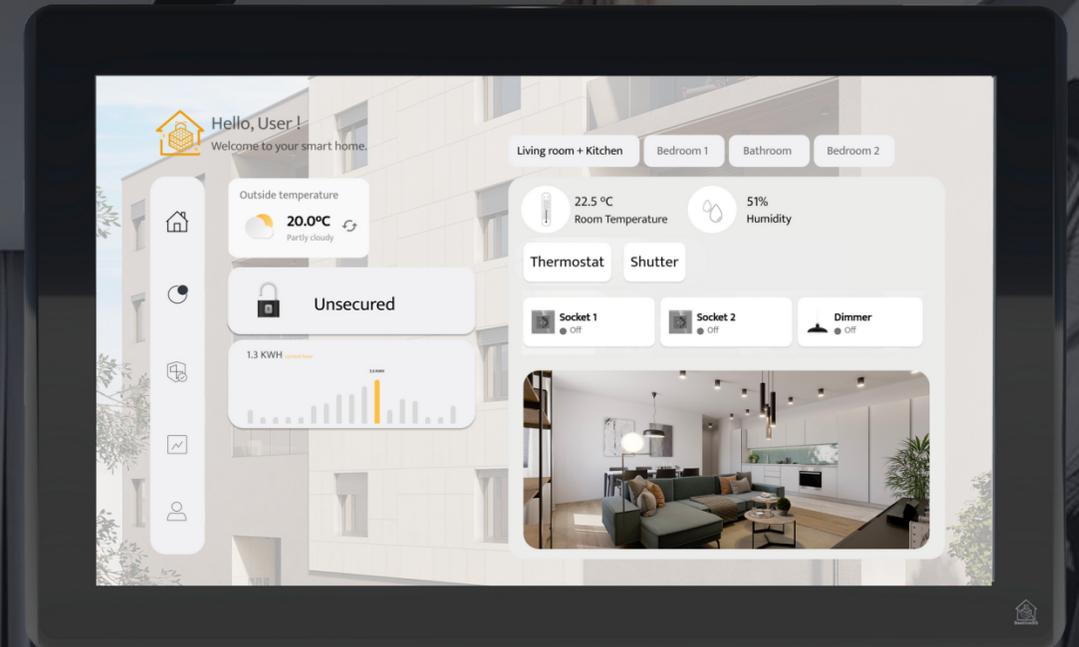

With our control unit technology, smart management is at your fingertips. Illuminate the room, adjust the temperature - all with a single touch. Control has become simple and intuitive.

Customized Automations:

Our control unit allows you to create and customize automations according to your lifestyle. Imagine waking up to the morning sun or spending an evening in the perfect relaxation environment. Your smart home now collaborates with you, not against you.

Integration Without Limits:

Our smart panel technology integrates all components of your home. Create synergy between all devices to achieve a seamless home experience. Our control unit allows you to be creative and imaginative in designing your ideal space.

Control Unit
BHV-CTRLP-010

Welcome to the era of innovation in smart home management. Our control unit brings you unparalleled control over your home, transforming every moment into a customized experience. And with our BeeHiveSG Smart Home application, your control over your smart home has never been easier and more convenient.

Manage your home easily and conveniently through our control unit. Customize the lighting according to your mood, set the ideal temperature for heating and cooling, dim the lights with a dimmer, or raise the blinds to control the amount of light. With our control unit, you can even manage sockets and intercoms via the integrated speaker and microphone, making your home smarter and more practical than ever before.

Discover our smart BeeHiveSG application - the key to transforming your home into a modern oasis of comfort and efficiency!

Our smart home application gives you complete control over all aspects of your property, allowing you to customize every detail according to your needs and lifestyle.

Our application offers a unique user interface adapted to all devices, allowing quick access to favorite scenes and devices. With it, you can control lights, temperature, dimmers, blinds, and turn sockets on and off. Additionally, the application enables intercom calls, door opening, and receiving notifications, providing you with complete control over your smart home. Integration with various smart devices and systems makes your home fully connected and tailored to your needs.

Transform your home into a smart oasis with our smart home app. Increase the comfort, efficiency and security of your home with easy access and control. Make your everyday life smarter.

Comfortable climate creates a pleasant environment.

Using a temperature controller, you can ensure the perfect temperature for your well-being. Comfort and energy efficiency are key elements of our smart home.

No more worries about the temperature in your home. Our temperature controller allows you to activate and set the heating and cooling temperature. Adapt your home to all weather conditions and comfort levels. Easily and efficiently manage the temperature to create the perfect environment for yourself and your family.

The BeeHive heating controller works with electric and/or hydraulic underfloor heating systems, radiator systems, networked and central heating systems, as well as other forms of heating.

- More comfort thanks to automatic heating
- Energy savings by regulating room temperature according to the request
- Innovative heating management
- Reduction of heating costs

Actuator for floor heating

Our actuator allows you to precisely adjust the temperature of your underfloor heating, enabling you to customize the temperature of each room according to your preferences.

With our mobile application or smart home platform, you can remotely control your underfloor heating - whether you're at home or on the go.

The operation is noiseless, and the connection of the nut and the installation method are simple, quick to set up, and easy to dismantle. Our actuators wirelessly communicate with room sensors and the central unit. This means there are no complicated cables and your system is fully automated.

With our smart underfloor heating actuator, you have complete control over your home, ensuring it's always a warm and comfortable space for you and your family. Enjoy the luxury of smart underfloor heating with our advanced technology.

Smart switches are the key to modernizing your home. Control lighting and devices via smartphones or home automation control panels, saving energy and adapting to your needs. Make your home safer and more comfortable with smart switches that allow remote control and automation. Simple, practical, and efficient.

Remote Control:

It enables you to control lighting and devices via a smart device or home automation control panel from the comfort of your home or even while you're away.

Automation:

Smart switches allow you to set timers and the sensors to automatically control lighting and devices according to your daily routine or conditions.

Energy Efficiency:

They provide you with the ability to monitor and control energy consumption, helping you to reduce electricity bills and decrease your environmental footprint.

Dimmer

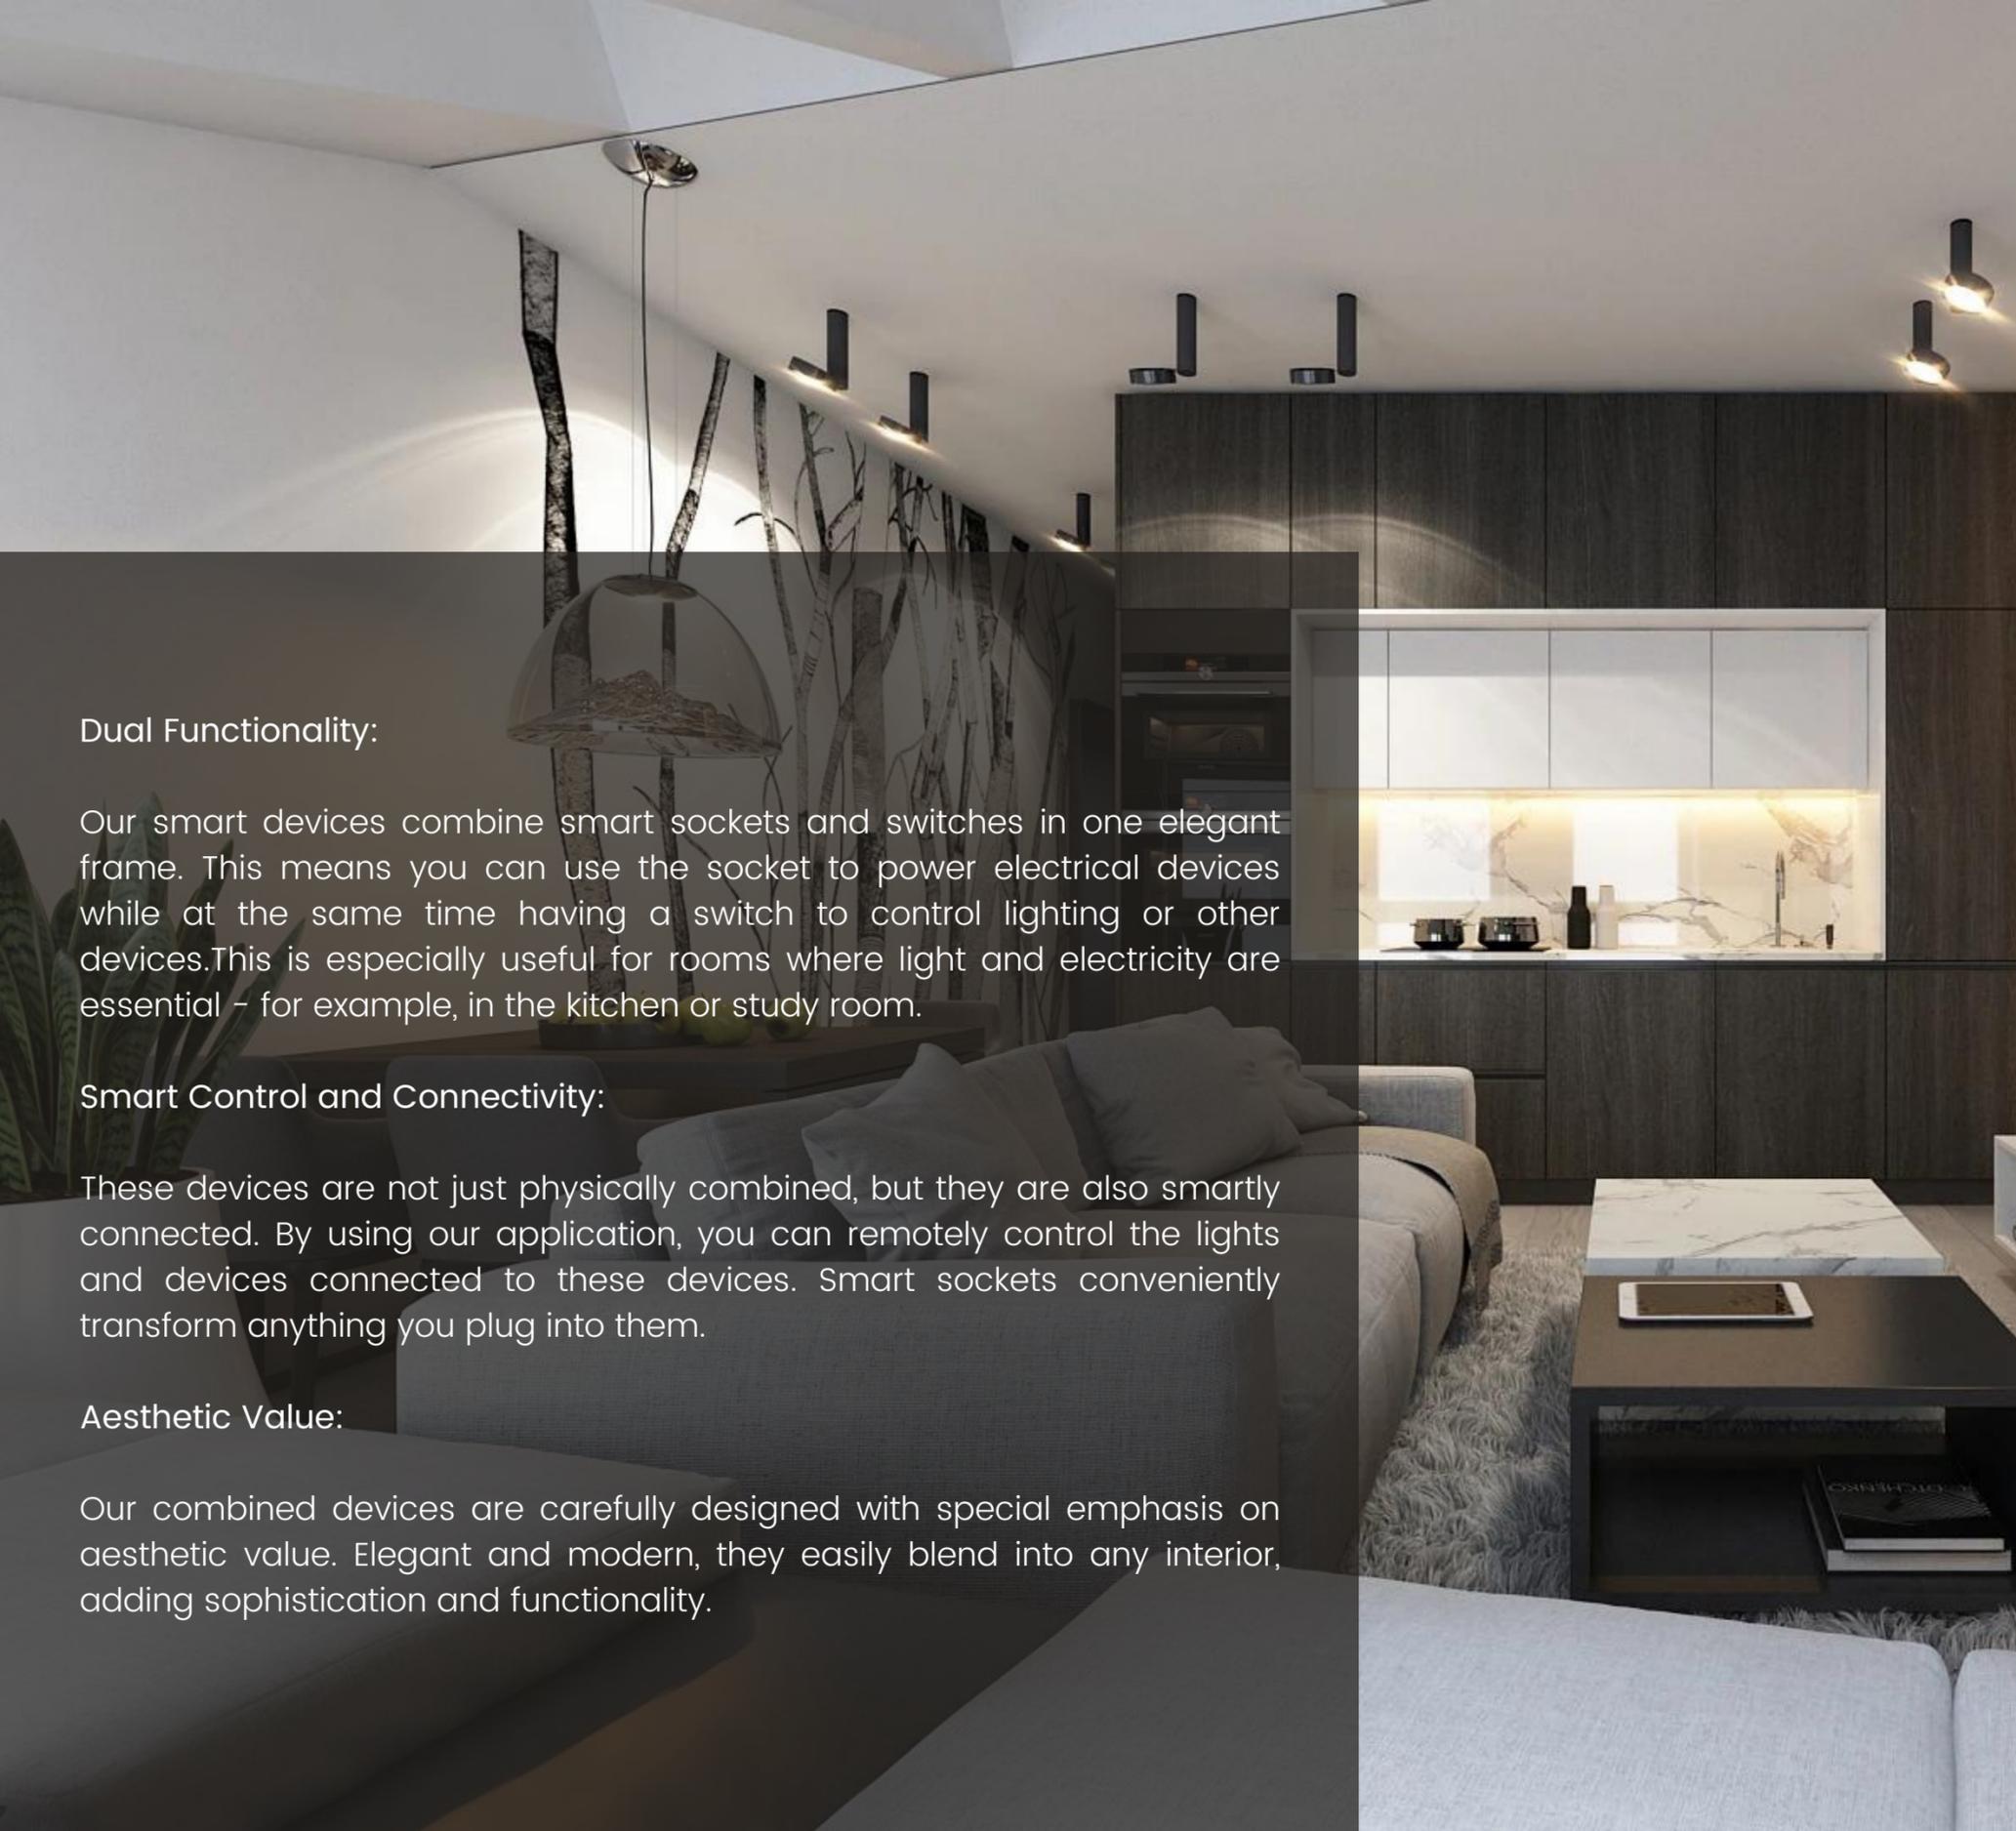

Roller Shutter Switch

Light Dimmer:

Our light dimmers allow you to adjust the light intensity in your home according to your current mood and needs. You can dim the lights for a relaxing atmosphere or increase them for greater productivity. Control them via smartphone or home automation control unit, making every room adaptable and efficient.

Control of roller blinds:

There's no need to get up to open or close the roller blinds. Our roller blind control devices elevate convenience to a higher level. With smart devices, you can easily manage the roller blinds and maintain privacy at all times. Set them to automatically raise every morning according to your preferences.

Dual Functionality:

Our smart devices combine smart sockets and switches in one elegant frame. This means you can use the socket to power electrical devices while at the same time having a switch to control lighting or other devices. This is especially useful for rooms where light and electricity are essential – for example, in the kitchen or study room.

Smart Control and Connectivity:

These devices are not just physically combined, but they are also smartly connected. By using our application, you can remotely control the lights and devices connected to these devices. Smart sockets conveniently transform anything you plug into them.

Aesthetic Value:

Our combined devices are carefully designed with special emphasis on aesthetic value. Elegant and modern, they easily blend into any interior, adding sophistication and functionality.

BHV-GTS-GN2/SKT/SKT-08

BHV-GTS-SKT-08

BHV-GTS-GN2/SAT+CAT5-08

In our assortment, we present smart sockets that are easily combined with different switches and other types of sockets – creating an ideal solution for maximum practicality and connectivity in your home. These smart devices make your everyday life even easier and more pleasant, providing you with complete control and comfort at all times.

Our smart sockets make your home even smarter and more practical. With them, you can easily control the power supply of the device via the control unit or mobile application. And not only are they practical, but they are also safe for your children.

CO Sensor

Our CO sensor is the key guardian of your home. This smart device continuously monitors the level of carbon monoxide, a silent killer that cannot be seen or smelled. If it detects any threat, it will automatically notify you through the mobile application.

The BeeHive CO sensor works with other devices, creating a smart, active protective structure.

Smoke Detector

The BeeHive smoke detector is a highly sensitive sensor that detects the presence of smoke or early-stage fires.

It detects even the slightest amount of smoke in the air with a built-in speaker that emits an audible alarm. The BeeHive smoke detector collaborates with other components of the smart home, creating a smart, active protective structure. Notifications on your mobile device alert you to the danger of smoke and fire even when you're away from home.

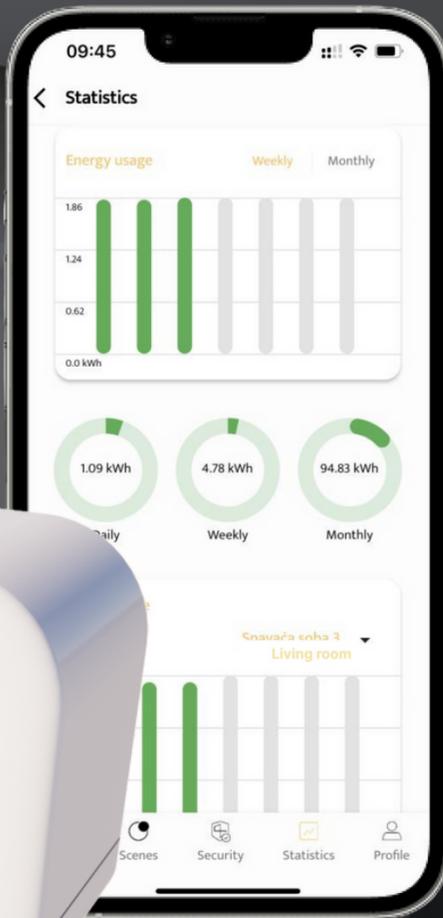

Water Leak Sensor

Reliably alerts you in case of water leaks. The system notifies you immediately of any water leaks by sending important information directly to your smartphone.

The BeeHive smart system can recognize potential threats, including minor leaks. Together with the functionality of the entire BeeHive system, the water leak sensor can achieve a level of leak detection and home security that you haven't experienced before.

Energy Consumption Meter

Monitoring Electricity Consumption and Savings

Monitoring daily energy consumption in a home or business allows owners and operators to control energy and then make the right decisions to save money.

The energy consumption tracking system calculates consumption using data obtained from meters and provides information to consumers, enabling them to see their usage patterns more clearly and use the information to monitor the system.

Contact Sensor

Motion Sensor that monitors the interior of your home.

With BeeHive contact sensors, you'll have peace of mind knowing that your home is secure while you're away. It reliably and accurately detects movements, instantly triggers an alarm, and immediately alerts you through the app if any unwanted guests try to access your living space.

Intercom system

Our BeeHive intercom system makes your building smarter and safer. With this system, you can see and communicate with visitors before you open the door to them.

Our system also makes life easier. Residents can open doors with a single touch on their smartphones, meaning they no longer have to carry keys or cards. It also means that staff no longer have to waste time issuing replacement keys or changing locks.

With the BeeHive intercom, you can control the entrance doors from anywhere, even when you're not at home. Secure your home with our smart technology.

Exceptional Opportunity for Investors:

Our Smart Home system provides incredible opportunities for investors looking for innovative projects. This advanced system is not just an ordinary smart home; it's a true revolution in the way we live and manage our homes, making it appealing to investors.

Adaptability for Everyone's Lifestyle:

Our Smart Home system can be highly adaptable to the needs of each user. It offers you the opportunity to create personalized solutions that will meet various needs and desires. Whether it's for family homes, residential buildings, or commercial projects, our system is adaptable and scalable.

Custom Solutions:

Investors have the opportunity to develop their own solutions and accessories within our Smart Home ecosystem, which opens the door for innovation and differentiation in the market.

Teamwork for Great Results:

Our engineering team and programmers collaborate with construction companies to ensure the integration of our system in design and construction. This synergistic approach guarantees a quick and seamless installation.

Simple Installation:

Our Smart Home system offers installation that is significantly easier than other solutions on the market. Whether you prefer a wireless or wired solution, the installation is quick and cost-effective, meaning excellent return on investment.

Now is the right time to join our innovative team and invest in the future of smart homes. Become part of the revolution that will shape the way we live and make our homes more comfortable, secure, and energy-efficient than ever before.
